

Name: Hai Jiang | **Gender:** Male | **Age:** 23 | **Phone:** 153-1584-4715 | **Bachelor's:** Guangdong Ocean University
Email: w_jianghai@163.com | **Target Role:** Java Backend Developer | **Experience:** 3 Years
English: CET-6 | **Major:** Software Engineering

SKILLS

Role: Java Backend Developer Salary: Negotiable Location: Shenzhen Employment: Full-time

1. Strong English reading and writing skills; able to read and understand technical documentation and academic papers.
2. Solid Java fundamentals, strong coding skills, and good coding standards.
3. Proficient in Spring, Spring MVC, and MyBatis; familiar with Spring IoC, AOP, and transaction management.
4. Proficient in MyBatis-Plus, including generic Mapper/Service components, LambdaQueryWrapper, logical deletion, pagination interceptors, automatic field filling, reusable CRUD modules, multiple data sources, and data masking.
5. Proficient in Spring Boot and familiar with its auto-configuration mechanism.
6. Proficient in Spring Cloud components, including Nacos, Gateway, OpenFeign, Sentinel, and Ribbon.
7. Familiar with MySQL DDL, DML, and DQL; capable of SQL optimization and familiar with slow queries and index invalidation scenarios.
8. Familiar with Redis persistence, master-replica replication, Sentinel mode, and solutions for cache breakdown.
9. Proficient in RabbitMQ messaging patterns, reliable delivery, idempotency, dead-letter queues, message backlog handling, and delayed messages.
10. Proficient in common Linux commands, including ps, top, tail -f, vim, netstat, systemctl, chmod, mkdir, pwd, sed, and rm.
11. Proficient in Docker image, container, and volume operations; familiar with Dockerfile packaging and Docker Compose orchestration.
12. Familiar with Elasticsearch, inverted indexes, and DSL-based index and document operations.
13. Experienced with Sentinel-based rate limiting, degradation, and circuit breaking in microservice systems.
14. Familiar with HTML and JavaScript, with basic knowledge of Vue.
15. Proficient in IntelliJ IDEA, SVN, Git, Postman, Maven, and related development tools.

EXPERIENCE

Java Developer | Guangdong Zhongyunbao Technology Co., Ltd. | Aug 2022 - Present

Responsibilities:

1. Designed, developed, and maintained Java applications, including enterprise, web, mobile-supporting, and backend services.
2. Wrote, debugged, and optimized Java code to ensure readability, maintainability, and performance.
3. Protected application and user data by following secure-development best practices.
4. Designed and developed service modules and completed frontend-backend integration.
5. Supported service deployment and production releases.

Java Developer | Guangzhou Zhuoteng Technology Co., Ltd. | Nov 2021 - Jun 2023

Responsibilities:

1. Developed Java backend services for the company's internet products.
2. Collaborated with frontend developers to deliver project features.
3. Maintained production systems and delivered iterative updates based on client requirements.

PROJECTS

Project: Zhongyunbao Logistics Transportation Management System | Aug 2023 - Present

Overview:

A logistics platform supporting multiple shipping methods. Users enter shipment information in a web browser and select the truck type and cargo volume. The server calculates the shipping price; after payment, an order is created and a courier is assigned for pickup.

The system tracks shipments by order type and status and notifies recipients by SMS upon arrival.

Technology Stack: Spring Cloud + Spring Boot + MyBatis-Plus + XXL-JOB + RocketMQ + Elasticsearch +

Redis + Nginx + Neo4j

Key Responsibilities:

1. Login module optimization: Improved the administrative login flow using account/password and CAPTCHA verification.

Implemented validation and exception handling for invalid credentials.

Removed temporary authentication data from Redis after successful verification.

2. Freight service optimization: Built the shipping-price workflow after users provide sender, recipient, and cargo details.

Generated charges and created the corresponding order after shipment confirmation.

3. Tracking service: Created tracking points after waybill creation and persisted them in MongoDB for subsequent queries.

Processed live location reports from drivers and couriers and updated each waybill's latest position.

Stopped location updates after delivery was completed.

4. Courier assignment: Integrated pickup tasks created by the dispatch system and enabled couriers to claim them in the app.

Converted orders to waybills after pickup at a service outlet and published events to the message queue.

Consumed MQ events and applied dispatch algorithms to allocate personnel and vehicle schedules.

Generated origin-to-destination tracks after pickup and supported courier assignment for final delivery.

Handled delivery confirmation and returned refused parcels to the dispatch center.

5. Pickup, delivery, and transportation: Supported WeChat Mini Program ordering and door-to-door pickup.

Converted accepted orders to waybills and initiated transfer and transportation workflows.

Updated order status as tasks were claimed and supported transfer, final delivery, and collection at the service center.

Project: Gym Life - Personal Fitness and Daily Workout App | Mar 2023 - Jul 2023

Overview:

A mobile application that shares health and fitness knowledge and helps users manage exercise and wellness.

It promotes an active lifestyle through personalized training plans, workout tracking, and health guidance.

Core features include courses, plans, leaderboards, training, weight records, favorites, and daily meal plans.

Technology Stack: Spring Boot + Spring Cloud + Nacos + Gateway + OpenFeign + Ribbon + Sentinel + MySQL + Redis + RabbitMQ + Elasticsearch + XXL-JOB

Key Responsibilities:

1. Coupon module: Supported coupon publishing and an internally designed redemption-code algorithm; implemented coupon claiming while addressing overselling, transaction invalidation, and distributed-lock issues.

2. Points module: Used Redis Bitmaps for check-ins, attendance tracking, comment points, and related scenarios.

3. Leaderboard module: Built real-time and historical leaderboards with Redis ZSet, ranked by points.

4. Like module: Provided shared like functionality for Q&A and personal posts using asynchronous MQ messaging.

5. Learning plan and progress module: Recorded video playback progress and enabled resume playback across devices; cached progress every 15 seconds

in Redis, then used a delayed queue to retrieve stable progress records and update the database.

6. Interactive Q&A module: Enabled users to ask course questions, coaches and users to answer, and others to comment.

7. Course schedule module: After payment, published an MQ event for the learning service to create the user's course schedule.

8. Documentation: Wrote and maintained technical documentation.

Project: Zhuoteng Smart Healthcare Mobile Remote Service Cloud Platform | Aug 2022 - Jan 2023

Overview:

A multi-tenant online healthcare platform for hospitals and clinics in Hong Kong, designed to integrate, manage, and optimize medical information and workflows.

Features included electronic medical records, appointment scheduling, financial management, patient portals, and data analytics.
Technology Stack: Spring Boot + MyBatis + Thymeleaf + Redis + RocketMQ + Feign + Spring Cloud + Ribbon

Key Responsibilities:

1. Wrote code comments, technical documentation, and user manuals to support team members and users.
2. Fixed defects and maintained the existing system.
3. Contributed to feature development and code implementation.

Project: Zhuoteng Integrated CRM Sales Management System | May 2022 - Aug 2022

An internal monolithic web system and comprehensive management platform supporting daily sales operations and management decision-making. Major modules included customer and supplier management, sales-process automation, reporting, HR management, financial management, statistics, and analytics.

Technology Stack: Spring Boot + MyBatis-Plus + Redis + Apache POI + ECharts + Vue + Element UI + WebSocket + OSS + Linux

Key Responsibilities:

1. Participated in requirements analysis by communicating with the sales department and collecting system requirements.
2. Participated in system design, including overall architecture and module decomposition.
3. Developed sales, reporting, HR, and related business modules.
4. Deployed the system to Linux servers.
5. Provided ongoing maintenance and resolved issues reported by the sales team.

Project: Zhuoteng Internal Operations and Employee Management System | Feb 2022 - May 2022

An internal employee-management system with an administrator portal and a responsive PC user portal. Core functions included employee profiles, attendance, payroll, permissions, data visualization, report generation, operational analytics, workflow management, and internal-process supervision.

System settings covered parameter configuration, permissions, logs, and security.

Technology Stack: Spring Boot + MyBatis-Plus + Redis + RabbitMQ + Apache POI + ECharts + Vue + Element UI

Key Responsibilities:

1. Enhanced log tracing for an internally deployed backend and diagnosed defects through error-log analysis.
2. Participated in requirements meetings and prepared requirement specifications.
3. Developed employee management, reporting, employee records, and access-control features.
4. Wrote mock-based unit tests.
5. Provided ongoing maintenance and resolved employee-reported issues, including email-related problems.

Project: Zhuoteng Intelligent Collaborative Office System | Dec 2021 - Jan 2022

A web and mobile office platform for instant messaging, workbench, tasks, schedules, push notifications, and workflows.

The web version was used on the internal network, while the mobile portal provided task and meeting reminders.

Web modules included smart portal, meeting management, email, task management, document publishing, office supplies, vehicles, personnel and role management; mobile modules included task scheduling, meeting services, and reminders.

Technology Stack: Spring Boot + MyBatis-Plus + Redis + RabbitMQ + Apache POI + ECharts + Vue + Element UI

Key Responsibilities:

1. Enhanced log tracing for an internally deployed backend and diagnosed defects through error-log analysis.
2. Participated in requirements meetings and prepared requirement specifications.
3. Developed meeting management, meeting reminders, task scheduling, and meeting-service features.
4. Wrote mock-based unit tests.
5. Provided ongoing maintenance and resolved employee-reported issues.

PROJECTS

National College Student Software Design Competition

Background: Collected application materials from the university hospital and studied patient and hospital needs to define system requirements.

Key Contributions: Data collection | Collected 12 academic papers through university and hospital stakeholders.

(2) **Case analysis** | Applied software design analysis methods and machine learning to collect and analyze data.

(3) **Project defense** | Selected as team representative; independently prepared a 30-page presentation and completed a 45-

minute defense.

Outcome: Won Third Prize in the 7th National College Student Software Design Competition and published one EI-indexed paper as first author.

STM-Based Single-Wheel Rotating Robot

Background: Investigated a Raspberry Pi-based intelligent robot for waste classification in the context of rapid AI development.
Key Contributions: Mathematical modeling | Optimized a KNN algorithm and built a waste-classification solution.
(2) **Documentation** | Wrote the project completion report and patent application.

AWARDS

- 1. 7th National College Student Software Design Competition
- 2. Third Prize, College Student Mathematical Modeling Competition
- 3. Third-Class Scholarship, School of Computer Science
